

COM435 - Software Product and Process Management 2024-2025

Lab Practical

Week 6

Your team should have established a large set of user stories ($n > 50$) which will have allowed you to scope out the teams MVP beyond what will ultimately be required. The user stories should be very close to final but may need to be reviewed against the INVEST method and user story splitting techniques applied if necessary.

Please use the following steps to guide your work flow, you are free to adopt your own work flow if that suits your team better:

- Identify your top 3 features (this is discussion based and not simply a vote)
 - Use MOSCOW to help with this.
- Select up 12 (approximate guide) user stories from the identified top features. (discussion based)
- Look at each of these user stories in detail and discuss:
 - Size - estimate (T-shirt or planning poker)
 - Value
 - Risk
 - Technical complexity
 - Dependency

In week 7 you will need to select a top 5 from these 12 and further detail the acceptance criteria for each of the 5 user stories selected.
