

Minimal Viable Product

Tutorial

MVP

- A minimum viable product is a product with just enough features to satisfy early customers and provide feedback for future product development

Why MVP

1. Avoid building the wrong thing
2. Get quick feedback
3. Produce working software quickly

Team Exercise 1

Get ready for Uni lecture

Scenario

You wake up at 8 am and you need to leave your house at 9 am to make it to the lecture.

What tasks do you need to get ready, from getting up to leaving the front door.

Break up into your teams and create a timeline of everything you do.

- Get ready
- Bring with you

1 hour to get ready

Get up

Leave house

60 Mins

30 minutes to get ready

Idea Generation

Workshop

Random word stimulus

- Identify the problem
 - A new feature for a car
- Select random word / image
 - Tooth brush
- Create free associations
 - Bristles, colourful, clean, how long to brush

Alignment

Free associations

Resulting ideas

Bristles

Pad of bristles to wipe your feet on before getting into the car

Cleans ->
environmental

Water used to clean window could be recycled back into the system

How long to brush
for?

The car could monitor how long you have been driving and monitor your vital signs to suggest driving breaks

Colourful

Car changes colour based upon the emotion of the driver

Team Exercise 2

Experiential - frustration / anger

- Experiential
 - Frustration
 - Anger
 - Happy
- What do you think when you get into a car?
- What frustrates you?
- What could be better/enhanced?
- What's missing?

Team Feedback
